

## Cost-effective, next-generation thermal and acoustical insulation.

QuietBlend® is a patented blend of man-made and natural fibers that provides superior thermal insulation and acoustical absorption. This revolutionary product is lightweight, cost-effective, eco-friendly, and developed to endure the harshest of environments. Best of all, QuietBlend® is not one-size-fits-all; it's engineered for the specific application and desired performance characteristics.

QuietBlend's exceptional performance is enhanced by the addition of a variety of surface treatments, which include facings, foils and films. It can also be combined with barrier treatments to provide the best solution for our customers' specific needs.

The engineered QuietBlend® composite is compression molded and most commonly used in transportation industry engine compartment and underbody applications, such as hood insulators, outer dashes, shock towers and tunnel insulators.

### Features

- Lightweight & cost-effective
- Meets OEM specifications
- Engineered for your application
- Ergonomically-friendly
- Extreme thermal & acoustical performance
- Can be combined with a variety of surface treatments (facings, foils, films)
- Durable & moldable
- Suitable for applications throughout the vehicle
- Weight range: 600 g/m<sup>2</sup> to 1,600 g/m<sup>2</sup>

**Random Incidence Sound Absorption**  
800 gsm QuietBlend® at various thicknesses
